Configure Store Template Layout for Block-Based Themes

Store Management · https://multivendorx.com/docs/knowledgebase/configure-store-template-layout-for-block-based-themes/

If you are using a block-based WordPress theme, you can customize the store page layout directly from the Site Editor templates.

To configure the store template:

1. Go to **Pages → Store Templates** from your WordPress dashboard.
2. Click on **Edit** for the template you want to customize.
3. This will open a sample store shop page in the block editor.
4. Inside the editor, look for the **Template** option.
5. From there, you can choose any of the available template layouts based on your preferred store page design.

This allows you to quickly switch between different store page structures and customize the storefront experience for your marketplace.
