PayPal Payout

Payments · https://multivendorx.com/docs/knowledgebase/paypal-payout/

Brief Introduction

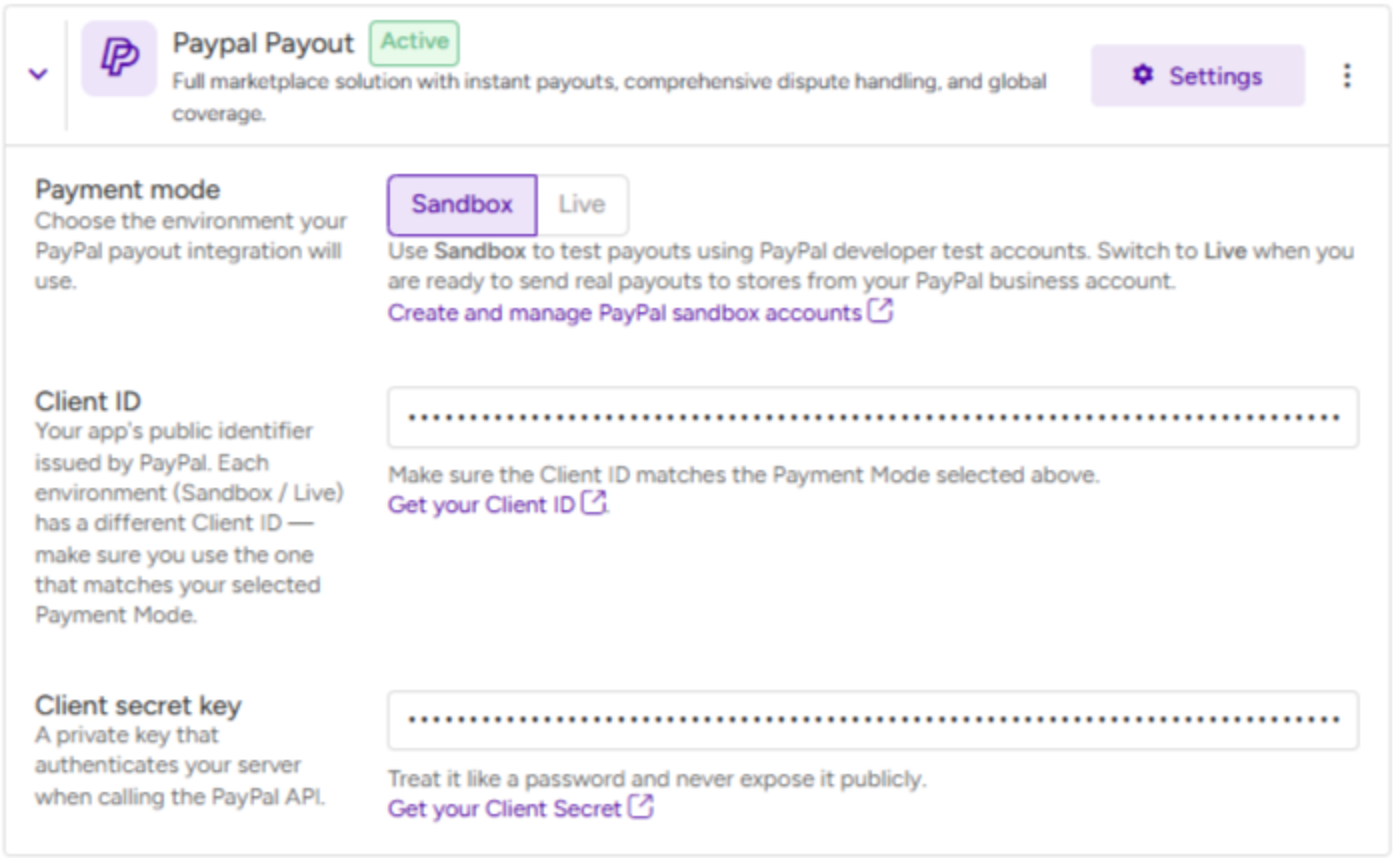

Simplify your marketplace transactions with automatic **PayPal Payouts**. This feature allows the marketplace owner to send **instant, hassle-free payments** to multiple store owners at once-saving time and ensuring a smooth payout process. Continue reading this guide to explore how PayPal Payouts can streamline your payment workflow.

Configuration of PayPal Payout from the admin dashboard

To set up a fully functional **PayPal Payout** system for disbursing store commissions, the admin must configure the PayPal settings within **MultiVendorX**.

From the admin dashboard, navigate to **MultiVendorX → Settings** and open the **Finance** tab. Within this section, go to **Withdrawal Methods**, locate the **PayPal Payout** option, and click **Enable** .

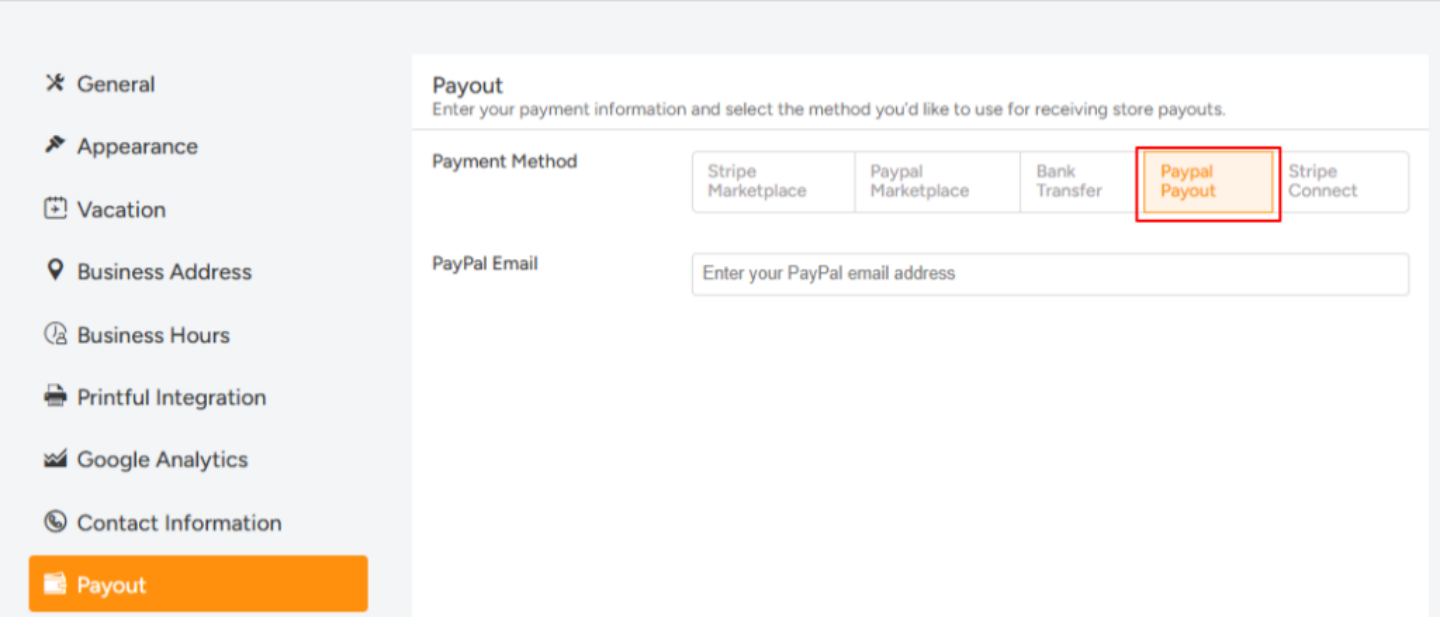

Once enabled, the admin will be required to select the **payment mode** and enter the **Client ID** and **Client Secret** associated with their PayPal account. To get the PayPal API details you can visit the page here.

Note: Select **Sandbox Mode** when testing the PayPal Payout setup before enabling it in a live environment.

Configuration from the Store dashboard

To receive commissions via **PayPal Payout**, the store owner needs to navigate to **Settings** from their store dashboard and then open the **Payouts** section. From there, they can select the **PayPal Payout** option and enter the PayPal email address linked to their PayPal account. Once saved, this email will be used to receive commission payments.

Note:PayPal Payout is an automatic payment method. Once a store owner selects PayPal Payout as their preferred commission withdrawal option and submits a withdrawal request from their dashboard, the payment is processed automatically. Apart from this, the payout is released based on the **payout frequency** configured by the admin.
