Single Product Multiple Vendor

Product Management · https://multivendorx.com/docs/knowledgebase/single-product-multiple-vendors-spmv/

> Starting from **MultiVendorX 5.0**, the earlier **Single Product Multiple Vendor (SPMV)** feature has been replaced and standardized under the **Shared Listing** model. This change globalizes the concept across the marketplace, allowing multiple stores to sell the same product through a unified listing system. The **Shared Listing** model provides a more flexible and scalable way to manage multi-seller products compared to the earlier **SPMV** implementation.
>
> To learn more about how this works and how to configure it, see the **Shared Listing documentation**.
